FULL STACK DEVELOPER

Full-Stack Java Developer with 15+ years of experience building scalable enterprise applications. Proven track record delivering microservices-based solutions in insurance, banking, and analytics domains. Currently based in Calgary, AB and actively seeking Java development opportunities. After relocating from Israel in 2024, took a transitional IT support role while re-establishing professional network in Canada. Actively seeking Java development opportunities.

KEY SKILLS

Back/Front: Java 6-17, Lotusscript, @-formula language, JavaScript, CSS, HTML, XSLT
Technologies and frameworks: Apache POI, Angular, Ajax, FusionCharts, DevExpress, Hibernate, JDBC, JQuery1.9 – 3, JUnit4-5, JSX, Lombok, Mapstruct, Mockito, Multithreading, Microservices, OpenAPI generator, XPages, REST, React, StreamAPI, SOA, Spring (SpringBoot, SpringData, SpringTest, SpringSecurity, SpringAOP, etc.).
Platforms: ELK\Kibana, Kafka, Kibana, Heroku, Visualization, Redis.
Databases: H2, IBM AS400, MySQL, MongoDB, NSF, OracleDB10, PostgreSQL, SQL Server.
Environments: DBeaver, Domino Designer, Domino Admin, Eclipse, Inellij IDEA, Jira, Jfrog Artifactory, Postman, Putty, SoapUI, Stoplight Studio, Surveyor, Visual Studio Code, WebStrom, WinSCP.
SCM: Bitbucket, GIT, Maven, SourceTree.
CI\CD: Docker, Portainer, Jenkins, K8's, Lens, kubectl
Development methodology: Agile, TDD, SDD

WORK EXPERIENCE

REGIONAL IT COORDINATOR, Environmental 360 Solutions, Canada *September 2024 – April 2026*
- Accepted a transitional role upon relocating to Canada while actively pursuing opportunities in software development.
- Provided technical support to end-users on company software systems and applications.
- Created detailed user manuals and documentation for platforms such as Trux, Fleetio, Sage, SharePoint, and Microsoft 365.
- Handled user service requests via the Compugen portal, including security incidents, PC registration in Azure + Intune, and Mailbox Access management.
- Configured and maintained user access permissions in Microsoft Active Directory and Azure environments.
- Managed IT equipment inventory, procurement of new hardware, and maintenance of existing devices.
- Collaborated with local service providers to resolve issues related to LAN, Internet connectivity, and the ProFuel portal, used for fuel usage data reporting and tax submission.
- Maintained and configured tablets and mobile devices used by truck drivers, ensuring all necessary software was installed and operational.
-Implemented new hardware standards, resulting in significant cost savings for the company.
Replaced expensive DocStation units with more cost-effective Ugreen hubs.
Established an in-house laptop maintenance program, including thermal paste replacement and component servicing, reducing external repair expenses.

FULL STACK JAVA DEVELOPER, Menora Mivtachim Insurance LTD, Israel *May 2020 – November 2023*

- Developed highly interactive and customized user interfaces using JavaScript, HTML, CSS, and XSLT, significantly enhancing the functionality of web applications for insurance agent inquiries and technical support systems.
- Designed and implemented custom RESTful and SOAP-based Web Service APIs to streamline backend processes.
- Collaborated closely with a team of 10+ developers on large-scale projects, ensuring seamless integration of functional code and maintaining high standards of software quality and performance.
- Applied deep technical expertise in the Software Development Life Cycle (SDLC) and core Java technologies to develop applications tailored to specific client needs, consistently delivering robust and reliable solutions.
- Successfully implemented an asynchronous logging process using Aspect-Oriented Programming (AOP) within the Spring framework, improving system efficiency and reducing log processing time.

- Enhanced code quality and boosted application performance, resulting in a 15% reduction in bugs and a more stable software environment.
- Developed advanced Kibana visualizations, enabling comprehensive analysis of application performance metrics and facilitating data-driven decision-making.
- Leveraged automated testing tools and frameworks (Test-Driven Development (TDD), JUnit (Mockito), and Postman) to ensure the highest quality in software delivery through rigorous testing practices.
- Proposed and implemented modern development tools like DBeaver, SourceTree, and Kibana, driving innovation within the department and mentoring junior colleagues to elevate their technical skills and contributions.

FULL STACK JAVA DEVELOPER, CommIt, Israel *August 2019 – May 2020*

- Effectively integrated server-side Java code within JSP files, utilizing JSP tags to develop dynamic web applications. Leveraged JSP's capabilities to generate dynamic content, interact with databases, and implement the Model-View-Controller (MVC) architecture, resulting in robust and maintainable applications.
- Designed and implemented new APIs from scratch for various system components using the Spring framework, ensuring seamless integration and enhancing system functionality.
- Developed a service architecture using RabbitMQ, incorporating external APIs to process rule-based data.
- Successfully combined and containerized all components using Docker, improving system efficiency and scalability.
- Implemented automated testing frameworks such as JUnit 5 and Testcontainers, significantly increasing test coverage of existing applications from 10% to 50%, leading to more reliable and stable software.

FULL STACK DEVELOPER, Optisor LTD, Israel *May 2018 – August 2019*

- Engineered a scalable microservices architecture for a data analytics platform, resulting in a 50% reduction in processing time and improving system scalability to handle a 3x increase in data volume.
- Developed and integrated RESTful APIs to enhance cross-platform compatibility, enabling seamless data exchange between the client and third-party systems, which increased overall system efficiency by 30%.
- Implemented continuous integration and delivery (CI/CD) pipelines using Jenkins and Docker, reducing deployment times by 40% and ensuring consistent, high-quality software releases.

HEAD OF THE ELECTRONIC DOCUMENT MANAGEMENT DEV DEPARTAMENT/FULL STACK DEVELOPER,
Bank RBK JSC, Kazakhstan June *2014 – April 2018*

-Led the development of a gateway for electronic document management integration, implementing servlet-based exchanges with banking systems. This improved the security of internal correspondence through additional filtering of transmitted messages, thereby increasing overall customer loyalty by speeding up internal communication processes, which boosted transaction volume by 25%.
- Streamlined backend processes by optimizing microservices architecture, reducing system downtime by 15% and improving the scalability of critical banking applications.

JUNIOR FULL STACK DEVELOPER, Real Soft LLP, Kazakhstan January *2007* – June *2014*

- Collaborated on the development of a customer management system, successfully integrating front-end interfaces with backend APIs, which resulted in a 20% improvement in user satisfaction.
- Optimized the user training process by developing new standards for creating technical "user manuals" and documentation for the electronic document management system, reducing client service integration time by 30%.
- Assisted in the migration of legacy code to modern frameworks, contributing to a smoother transition and reducing technical debt by implementing best coding practices.

EDUCATION

Bachelor's degree in Computer Science (WES Evaluated)
Full Stack Java Development, TelRan College of Programming & Software Engineering, Rehovot, Israel

LANGUAGES: English, Hebrew, Russian, Ukranian
